OGUNNAIKE MATTHEW FOLAWE

Software Engineer

SUMMARY

Software Frontend Engineer with knowledge in UI Design, HTML, CSS, JavaScript, React.js, and other technologies. backed by nearly a year of experience and more than 10 projects across different sectors

Experience

MegaBoss

React developer   July 2023 – Present

- "I've successfully created a Contact Page component that improves user interaction while also integrating the Navigation Bar and Footer sections seamlessly." This method not only keeps the design elements consistent throughout the website, but it also streamlines the user experience.

- By meticulously designing every piece of the page, I expertly brought the prescribed UI design to life. My attention to detail and creative flare meant that the final product completely aligned with the intended user experience.

- At the time, I considered myself a React novice, but I quickly acclimated to the framework required for the project. This experience demonstrated my ability to swiftly comprehend and assimilate new technology, allowing me to contribute effectively to the project's success.

- The impove my knowledge in collaboation with other developers and with the use of git and github.

Nerdfactory, DesignU

Frontend Development   Oct 2022 – Feb-2023

- I spearheaded a team of five individuals on a capstone project, which encompassed graphics and product designers, as well as other frontend developers. Through my leadership skills, I effectively guided the team towards our collective goal, ensuring seamless collaboration and successful project completion

- The project was expertly created using HTML, CSS, and JavaScript. Its digital home is on GitHub, where the code and resources are hosted for easy access.

- Conflict Resolution: Proven ability to discuss and resolve problems within the team, contributing to a harmonic and productive work environment.

- In collaboration with my team, I effectively guided the project to completion, achieving success long before the demo day.
